

*“SRT humming..... Soil enriching, Crops booming and Farmers Empowering”*

## A Journey of Learning: Nashik Farmers Visit to Saguna Regenerative Technique

On the 9th of March, 2024, a group of 55 farmers embarked on an educational journey from Peth taluka of Nashik district, Maharashtra, to Saguna Baug. Their mission was to delve into the innovative agricultural practices of the Saguna Regenerative Technique (SRT). Despite an unexpected delay that saw their arrival pushed to 8 PM, the spirit of learning burned bright as the Team SRT welcomed them with open arms and an enlightening presentation on SRT that lasted until 10:30 PM.

This visit was made even more special with the presence of Dr. David Maggs, a distinguished veterinary ophthalmologist from UC Davis, USA, who joined the farmers' meet. His interaction with the farmers added a unique international perspective to the exchange of knowledge, underscoring the universal relevance and adaptability of the SRT.

## Bridging Knowledge: Paani Foundation Taluka Farmer group Explore SRT Success Stories

In a separate yet equally inspiring event on the 1st of March, 13 farmers from Jamner taluka of Jalgaon district took a significant step towards regenerative agriculture. Motivated by a video of Mr. Gulabrao Khandagale's successful implementation of SRT Farming, these farmers visited SRT plots in Fulumbri taluka of Chatrapati Sambhaji Nagar. A total of 17 SRT plots were meticulously examined during their visit.

The soil in Jamner taluka is known for its salinity, a challenge that these farmers are eager to overcome. By learning about SRT technology, they aim to rejuvenate their lands and remove the salinity that hampers their agricultural productivity. This visit, organized by the Pani Foundation taluka group, represents a proactive step towards embracing innovative solutions for soil health and sustainability.

# Enjoy the beautiful, uniformly vigorous & productive crops of this Rabi Season by SRT

Thank you!
