

“SRT humming..... Soil enriching, Crops booming and Farmers Empowering”

Namaskar,

We are thrilled to share that Chandrashekhar Bhadsavle is currently in the USA, embarking on a visit filled with nostalgia, learning, and forward-looking discussions. From March 20th to April 18th, Shekhar is reconnecting with his old memories and paving the way for future collaborations.

A Reunion to Remember: Shekhar's trip kicked off with a heartwarming reunion with Ishwarbhai Patel and Gajendra Singh, his roommates from UC Davis during the years 1970-72. This gathering was not just a trip down memory lane but also a reflection on how their journeys have diverged and converged over the years.

Beautiful crops of Groundnut, Onion and Jowar by SRT

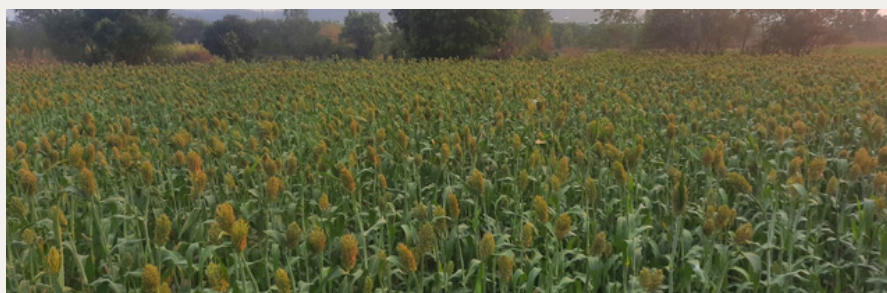

In our latest update from the fields of West Bengal, we are excited to share the remarkable progress of Mr. Deepak Kha's SRT. After his successful SRT rice cultivation in Kharif 2023, Mr. Kha has planted groundnut in summer 2024 on the same SRT raised beds, without disturbing it by plowing. The outcome has been extraordinary. The groundnut crop thriving beyond expectations.

We are also excited to share with you photos of these highly vigorous crops, which not only highlight the farmers' achievements but also inspire a sense of pride in our agricultural heritage. These images capture the essence of what can be achieved with dedication, innovation, and a deep understanding of the land.
